Motivation

- Keyboard, Mouse have significant role in HCI.
- Now speech recognition and gesture recognition receive great attention in the field of HCI.

Introduction

- Deep neural networks are a powerful tool for learning image representations in computer vision application.
- Object tracking is an important challenging task within the area in computer vision.
- I present deep learning methods to track the hand gesture and recognise it.
- Extract the feature and feature representation of the target object is compared to the search region.

Dataset

- Collect 24 videos by laptop camera and phone camera in different scene with different gesture.
- Extract frames from all videos and save frames in following file structure

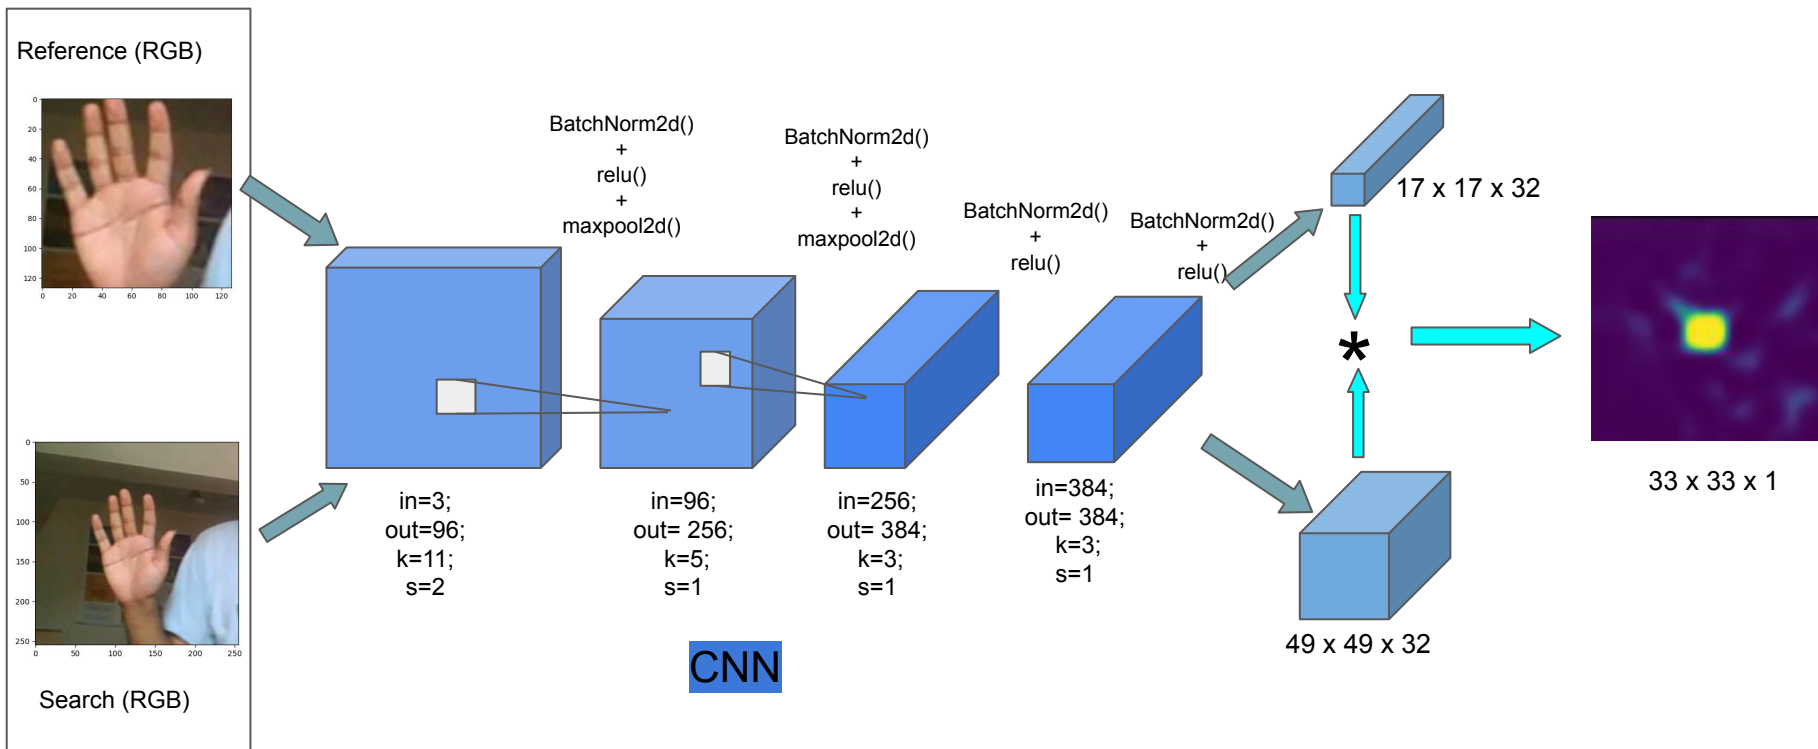

```
hand_dataset/  
├── test  
│   ├── different scene  
│   │   └── all frames  
├── train  
│   ├── different scene  
│   │   ├── annotations  
│   │   │   └── all frames annotations  
│   │   └── data  
│   │       └── all frames  
└── validation  
    ├── different scene  
    │   ├── annotations  
    │   │   └── all frames annotations  
    │   └── data  
    │       └── all frames
```

- Train set contain 16 videos, where total number of frame is 12339.
- Validation set contain 8 videos, where total number of frame is 3020

Data Sample

Fully-Convolutional Siamese Network

Dataset Preprocess

- Choose two frame one for reference image another for search image.
- First resize the object then crop from frames.

Fig. original frame

Fig. reference image

Fig. search image

- Another sample where add padding.

Fig. original image

Fig. reference image

Fig. search image

Training

Fig. original label

Fig. predicted label

Batch size	Epoch	Learning rate	Optimizer	Loss
64	15	1e-2	SGD	BCEWithLogitsLoss

Training Result

- Calculate the Area under the ROC Curve, Center error, Loss over validation dataset.

```
{  
  "AUC": 0.9603479744922644,  
  "center_error": 9.910661631253152,  
  "loss": 0.07811034641539057,  
  "epoch": 13.0  
}
```

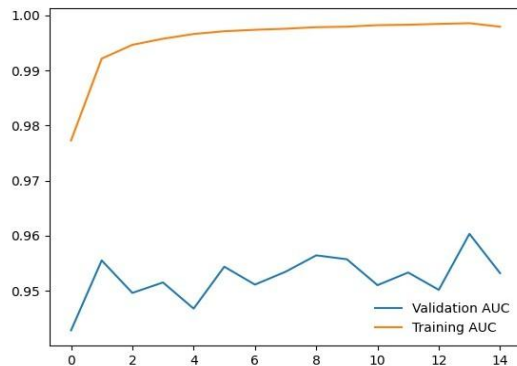

Fig. AUC plot

Fig. center error plot

Fig. loss plot

Inference

- These are the outputs of Convolution Layers

- Get cross correlation then pass the map in sigmoid function

Fig. Cross Correlation

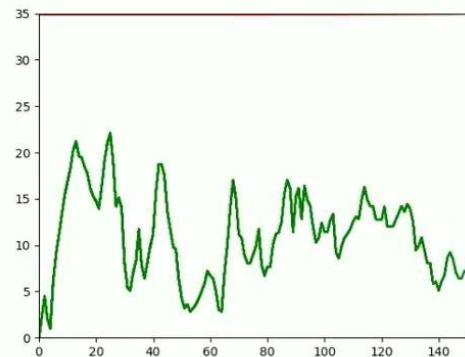

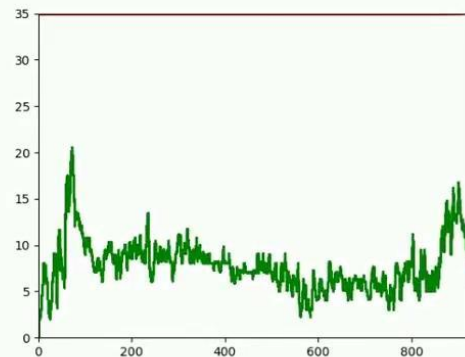

Fig. Score map

Evaluation

Optical Flow

Classification
